Furthermore, (I) is also useful for cc qut protection or regeneration and treatment of lung or liver fibrosis, creperfusion injury in various tissues, various immune deficiencies and cc disorders including severe combined immunodeficiency (SCID), bacterial or cc fungal infections, autoimmune disorders e.g. multiple sclerosis, crhoumatoid arthritis, diabetes mellitus, myasthenia gravis, allergic creactions and conditions, such as asthma or other respiratory problems. Cc in addition, (I) affects biorhythms or circadian cycles of rhythms, cc dietary fat, lipid, protein, carbohydrate, vitamins, minerals, provides co analgesic effects or other pain reducing effects, immunoglobulin like activity and can act as an antigen in a vaccine composition to raise an immune response. AAUZ8020-AAUZ8395 represent novel human secreted protein composition acid sequences of the invention.

                                                                      δÃ
                                                                                                                                                                                                         cc determining the presence of or predisposition to a disease associated cc with altered levels of polypeptide. The polypeptides are also useful for cidentifying agents (agonists and antagonists) that bind to them. Cells cexpressing the proteins are useful for identifying a therapeutic agent (for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising cc the nucleic acids encoding the polypeptides and cells genetically crimine are useful in genetic vaccination, testing and therapeutic series are useful in genetic vaccination, testing and cc increase stem cell proliferation; to regulate haematopoiesis; and in the carpitaling the proteins and/or stimulation; as anti-inflammatory agents; and cc in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid cc sequences of novel human secreted proteins of the invention.

         The invention relates to novel isolated human secreted polypeptides (I) and plynucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopolesis, stem cell survival, bone growth and remodeling. (I), (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a fragment of a secreted human protein encoded by the nucleic acid molecule detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311.704410; maino acid sequences AAW78126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed (see AAX04311 for described mains the presence of the second of the described mains the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ŭ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form specification, but was obtained in electronic at ftp.wlpo.int/pub/published_pct_sequences.
